SOURCE: GOOGLE ADS ACCOUNT REPORTS

THE SHORT VERSION

Cleaning leads are easy to buy. Good cleaning clients are not.

With Google Ads, a cleaning company's inbox and phone can fill up quickly. But a notification is not a client. The person who wants the cheapest one-time clean, the one outside your service area, and the one searching for a job cost exactly the same click as the family that books you every other week for years.

Most cleaning businesses can see enquiries, but can't see which keywords, ads, and lead types are worth paying for. This case study follows one cleaning company's account: how it was restructured around that question, and what happened to the numbers.

SELF-CHECK

Does this sound like your cleaning business?

1. You get calls, but too many are price shoppers who want the cheapest clean
2. People searching for cleaning jobs click your ads
3. DIY cleaning tips and product searches eat your budget
4. You can't tell which leads came from forms and which from calls
5. Lead forms arrive, but many people never answer when you reply
6. You want recurring clients but mostly get one-off cleans
7. Your ads show in areas you don't serve
8. Your search terms report is full of queries you didn't choose
9. Cost per lead keeps creeping up and nobody can say why
10. You don't know which keywords bring clients who stay

THE CHALLENGE

The starting point: $96.80 for every conversion

In the window starting May 30, 2025, the account spent $23.2K and produced 142 lead form submissions and 98 phone call leads. Each conversion cost $96.80, which is a high price for a service business that lives on repeat customers.

$23.2K	142	98	$96.80
Ad spend	Lead form submissions	Phone call leads	Cost per conversion

Two lead channels, tracked separately: lead forms and phone call leads.

Where cleaning budgets typically leak (what I audit first)

1. **Job seekers and DIYers**
   Searches from people hunting for cleaning work, or looking for a how-to, trigger the same paid click as a homeowner ready to book.

2. **Price-only shoppers**
   Without clear controls, budget flows to the cheapest one-off clean instead of recurring or deep-clean clients worth more over time.

3. **All service lines in one bucket**
   Recurring, deep, move-out, and commercial cleaning share a budget, so you can't see which one actually pays.

4. **Forms and calls blurred together**
   Forms and phone calls behave differently. If they aren't tracked as separate conversions, you can't tell which channel to feed.

5. **Loose location targeting**
   Wide radiuses and relaxed location settings show ads outside the area you can realistically serve.

STRATEGY & CAMPAIGN APPROACH

Pay for the clients worth keeping

The question behind every change: will this bring in a client who books, stays, and is worth what the click cost?

1. Separate service lines, so budget follows lifetime value

Recurring home cleaning

Highest lifetime value. Budget is protected here first.

Deep & move-out cleaning

High-ticket jobs with seasonal peaks. Given room to scale.

Office & commercial

Longer decisions, larger contracts. Targeted separately.

Standard one-off cleans

Controlled so price shoppers don't dominate the budget.

2. Keyword control

Phrase and exact match around service + location intent, so spend stays on people ready to hire a cleaner.

3. Layered negatives

Filters out job seekers, DIY, supplies, courses, and free or cheapest-only searches.

Jobs · DIY · Supplies · Courses · Franchise · Free

4. Two lead channels

Lead forms and phone calls are tracked as separate conversions, so Google learns from both and you can compare them.

5. Precise locations

Ads limited to the areas you serve, favoring people who are actually there.

6. Qualifying ad copy

Ads and landing pages name the service, the area, and the next step, so the right people raise their hand.

7. Speed-to-lead

A short, simple form and a call-first mobile path, because the first cleaner to reply often wins the job.

Google Ads optimizes toward whatever you tell it counts as a win. Track forms and calls properly, and it finds you **more of the leads you actually want**.

OPTIMIZATION PROCESS

A steady loop, not a one-time fix

Cost per conversion didn't fall in one move. It came down in steps as the account was cleaned up, restructured, and refined with real data.

WINDOW FROM MAY 30	JUN 1 – JUL 31	WINDOW FROM SEP 1
$96.80	$77.42	$50.64

Cost per conversion in each reporting window, from Google Ads.

EVERY WEEK

Review search terms, add negatives, and check which service lines produce forms versus calls.

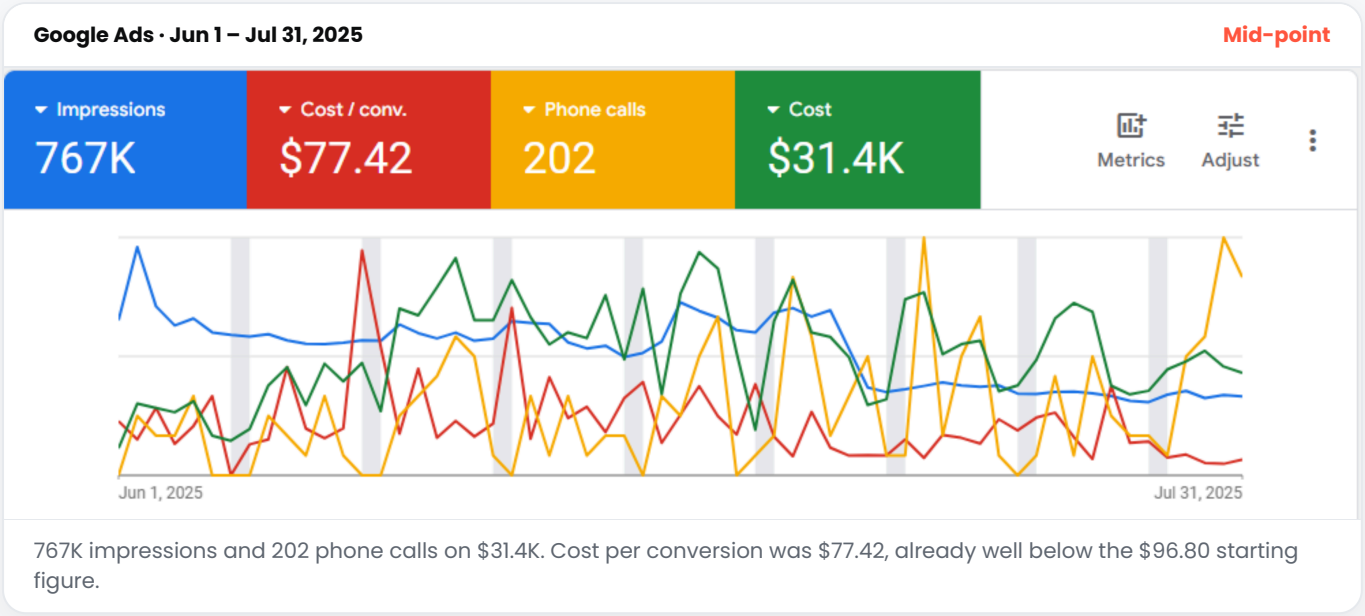

EVERY MONTH

Shift budget toward the service lines with the best cost per conversion. Refine locations. Test ad copy and form length.

ALWAYS

Keep forms and calls tracked as separate conversions and compare cost per conversion across windows.

Mid-point: June 1 – July 31, 2025

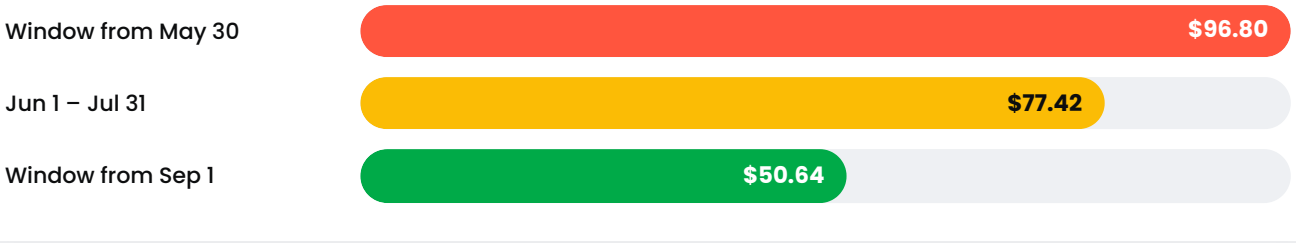

767K impressions and 202 phone calls on $31.4K. Cost per conversion was $77.42, already well below the $96.80 starting figure.

RESULTS

Cost per conversion nearly halved

Across the three reporting windows, every conversion got steadily cheaper, while lead form submissions more than tripled.

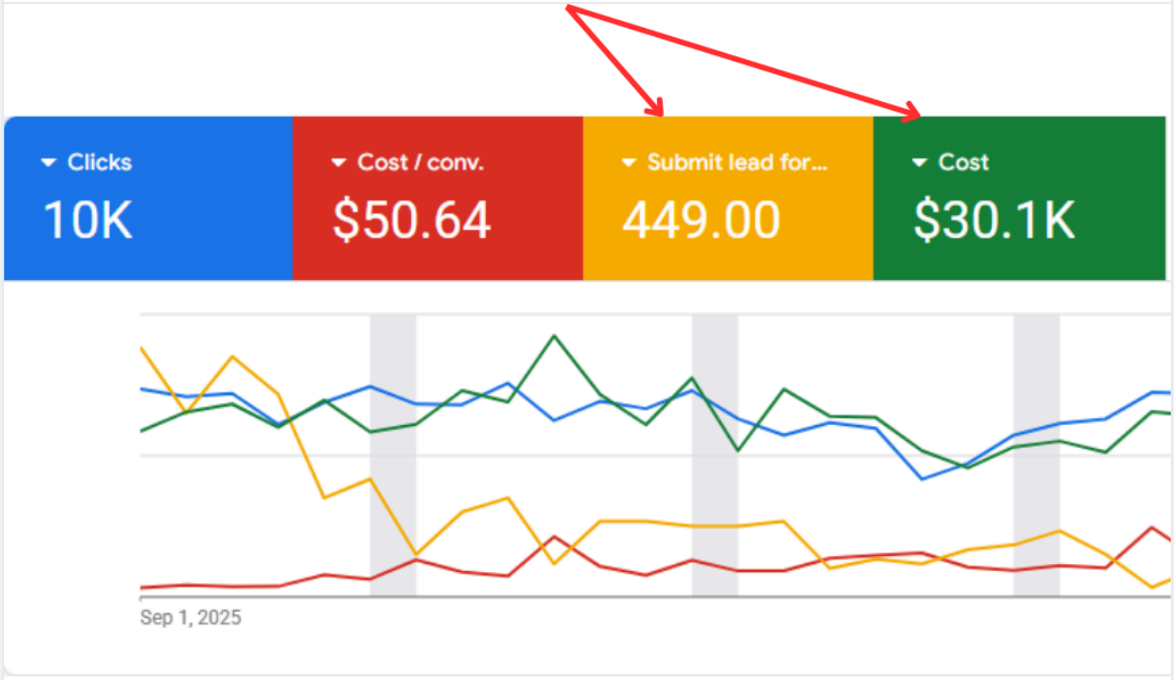

-48%
Cost per conversion
$96.80 → $50.64

3.2×
Lead form submissions
142 → 449

+30%
Ad spend
$23.2K → $30.1K

Google Ads · Window starting Sep 1, 2025 — Latest window

449 lead form submissions on $30.1K from 10K clicks at $50.64 per conversion.

What this means for a cleaning business

Spend rose about 30%, but lead form submissions rose about 220%. The extra budget went to work because the account was structured so that money followed the leads worth having, not just the cheapest clicks.

Figures are as reported in Google Ads for each window shown; windows may overlap, so they are not additive. Conversions are as tracked in the client's account.

KEY TAKEAWAYS

What cleaning business owners can take from this

1 **Track forms and calls as separate conversions.**
They behave differently, and you can only improve what you can see.

2 **Cost per conversion is your health check.**
Here it fell from $96.80 to $50.64 while spend rose only 30%.

3 **Build the account around clients who stay.**
Recurring and deep-clean clients deserve their own structure and protected budget.

4 **Negative keywords keep job seekers and DIYers out.**
A weekly search-term review keeps them from eating your budget.

5 **Efficiency is maintained, not set once.**
A weekly and monthly loop is what keeps cost per conversion trending down.
